

Career Objective

I am looking for a job in front-end web development. I am patient hardworking, and I have a strong teamwork spirit in my work position. I can be careful and practical in my workability and have a strong sense of responsibility for my work! I enjoy working in a team atmosphere. I can quickly improve my technical level, but I can also get a high sense of achievement when I work together with my team in the challenge to find the exit is a very pleasurable thing, and I realize the value of my life.

My hobbies, such as hiking or riding, allow me to relieve stress and emotions caused by my work and life.

Skills Summary

Problem Solving

Problem-solving ability and working ability can be equated in every working position. First of all, we need to identify where the difficulties lie and what the core problem to be solved is. For example, most of the programmers' daily work is checking, modifying, and coding bugs, but for us, the purpose of our work is not only bugs. We need to solve the problem when we encounter a complicated issue, sometimes alone, sometimes we need to ask for help from the team. So problem-solving should not be slow, the first time to solve problems. Then again, it is an excellent habit to ask questions if not understood and ask colleagues or team leaders. While solving problems can also achieve the purpose of learning and communication. Finally, I have a habit of summarizing issues and solutions, which will be more effective in future work to try not to make the same or similar mistakes and ensure that I have mastered the ability to solve problems.

Learning Ability

I can grasp and adapt quickly to new knowledge. The desire and curiosity for new knowledge are indispensable parts of the IT professional. I've recently been expanding the breadth of my learning in terms of technical education and not letting myself get stuck in a framework. I started my new knowledge mastery in C# through video tutorials on Udemy. I will be working on real-world projects in the coming time by putting the learning into practice aspect. I will continue to broaden my horizon while gaining knowledge. We will enrich ourselves in different perspectives and fields. By mastering more knowledge to enhance their knowledge base to apply to the actual work.

Communication Skills

No matter what field we work in, communication skills are based on interpersonal honesty. Honesty is the bridge between people. In my previous job, the most communicators I faced were students. As teenagers can't understand the importance of communication in the workplace until they enter society, it is our responsibility to provide them with the necessary skills and interact with them in good faith every time they communicate. Using role reversal in the communication process can get more people to accept and adopt their ideas or opinions and achieve more effective communication.

Self Development

Developing oneself begins with a love of learning, extensive study, and the ability to learn by example in the process of learning. At present, I enrich myself by attending various courses and training in programming, and this path is also necessary to support my continuous development. There is no shortcut to developing myself, only to strengthen myself, to do a single-minded, down-to-earth good first job that can reach the ultimate goal.

Experience Summary

Web Development – Repair Plus (Internship)	11/2021 - 02/2022
Administration – Economic Management Cadre College	10/2008 - 12/2020
Web Development – College Library Website	07/2002 - 03/2004

Education

Master in [ICT] at Whitireia Polytechnic	02/2021-present (Graduating 2022)
Bachelor in [Computer Science and Technology] at Changchun University of Technology	03/2012-06/2014
Diplom in [Computer Application] at Institute of Management & Software of China	09/1999-07/2002

Detailed Experience

Web Development – Repair Plus (Internship)	11/2021-02/2022
---	-----------------

Through the requirement analysis, combined with the main framework of the company's current website, WordPress was used to make a responsive website revision and the design of plug-ins to realize the booking function on the website.

Skills / Tools:	HTML5, CSS3, WordPress, and PHP
Achievements:	Implementing a responsive website and the addition of booking function

Web Development – College Library Website	07/2002-03/2004
--	-----------------

Responsible for the design and maintenance of the website in the library.

Skills / Tools:	HTML, Macromedia DW, Macromedia DW, Flash, and Fireworks
Achievements:	Interface to the library's home page and book search system

Technical Skills

HTML/CSS

- Build a website using HTML, containing data about the website's content.
- Constructed website things are decorated with CSS to make them meet the website's desired goals.

JavaScript

- Implementing dynamic change effects on web pages, such as ad rotation, validation of form data, collapsing menus, etc.
- No page reloading is required, just by changing the appearance or content of a local area.

Other languages that I have used: React, C#, SQL

Interests

I do not have many hobbies, but I am very interested in badminton. Since I was a child, it may be a great relationship with my father to practice badminton with me. I usually like outdoor sports, such as hiking and riding.
